

Develop A Good Safety Attitude

Take time to think about what you do and how you can be safe without causing harm to yourself and others.

BE FOCUSED Concentrate on the task at hand. Multitasking may have short term advantages but studies show that multitasking is a source of stress and fatigue, making you less productive in the long run.

BE ORGANIZED Manage and plan your tasks. Make two trips from the car instead of trying to carry too many things at once. Have the proper tools and equipment available for use before you start a project.

BE ALERT Be aware of your surroundings and recognize dangerous situations when you see them. If you see something, say something.

District #318 wants you to work safe and be safe.
